

# ADJUST-A-VIEW®

Moveable Arches by Omega

## RENOVATION PROJECT WASHINGTON D.C.

This building was recently renovated . A significant issue needing a solution was the large arched windows.

While the windows made an architectural statement and allowed light into the building, there was no way to control the heat gain/loss, glare and UV issues.

The building has 28 arched windows with a diameter of 115" and 6 arched windows with a diameter of 96". The ADJUST-A-VIEW® is the only moveable arched window treatment that can accommodate windows that large. The system can handle arched windows up to 144" in diameter.

The ADJUST-A-VIEW® was the perfect solution for this project. Energy efficiency has greatly improved as the cellular shades help keep the heat out in summer and the cold out in winter.

Natural light is available on demand by opening the semi-opaque shades the desired amount. Overall occupant comfort is much higher.

Less glare, improved energy efficiency, reduced UV, vastly improved aesthetics.....the perfect solution for **your** arched windows!
